Moldable Mat

The PIG Bend n' Shape mat protects against potential slip and fall hazards. The moldable absorbent mat conforms to virtually any shape to control condensation, leaks, and drips. Its non-permeable, heavy-duty foil backing creates a form-fitting leak barrier for odd shapes and difficult places like pipes, gear boxes, ductwork, hoses, and HVAC units. Lightweight and easy to transport, the mat can be cut to its desired size and shape with scissors. In addition, the mat can be shaped and used foil-side up to deflect leaks and drips or funnel liquids away.
