## Size Reduction Device

The Delumper 2020L crusher features a larger throat opening in order to easily process greater volumes of agglomerates and lumps to a free-flow condition. The crusher features seamless stainless steel body construction, a 20 in. x 20 in. inlet and discharge opening and wide mounting flanges for easy connection to systems or hoppers. The unit utilizes specially designed teeth mounted on a smooth rotating drum, which intermeshes with sizing combs. Solids are reduced to their basic grain size without overgrind, heat rise or fines.
