

## Particulate Sensors

These particulate sensors protect blowers, turbines, and vacuum pumps in powder conveying, gas processing, and heat recovery applications. Rugged, sensitive, and virtually maintenance-free, they are designed to prevent downtime and equipment repairs. Applications include the fly ash conveying industry, where they detect abrasive coal dust, and turbine protection in top gas recovery at steel plants.

**FilterSense, Beverly, MA; 978-927-4304; [www.filtersense.com](http://www.filtersense.com)**

Editor's Note: Sensor communications include 4-20 mA, Modbus, and Ethernet; display and alarm relay contacts provide local interface.
