Custom Airlocks (3244)

These airlocks are available in customized fabricated and machined models for pneumatic systems, gravity feeds, and volumetric discharge devices. Fabricated models handle dust collection, plastics, feeds, and corrosive chemicals where pressure differentials are 20 inches of water column or less. Urethane wipers provide a tight fit between fabricated rotors and housings. All airlocks have cast housings for added durability and are designed for higher pressures as well as difficult and abrasive materials. Rotor to housing fit is a tight 4 to 6 thousandth of an inch. Both models offer carbon and stainless steel rotor and housing options.
