Diaphragm Valves (3196)

Dia-Flo diaphragm valves feature bubble tight shut-off, isolated bonnets, adjustable travel stops and a long list of unique features designed specifically to optimize valve performance and life. To increase the range of valve application and reduce the cost of ownership, the valves are available in a full range of body materials and linings, can be supplied with a wide variety of diaphragms, and can be automated with a full range of actuation accessories. Dia-Flo Weir type valves feature materials that are resistant to acids, bases, and solvents, and they offer an economical primary flow control device for all corrosive applications.
