MERV 15 Rated Cartridge Filter

The Ultra-Web nanofiber technology line now includes a higher efficiency cartridge filter that delivers longer filter life, cleaner air, and greater energy savings. It's called the Ultra-Web SB and has been certified by independent lab tests at MERV 15 efficiency. The filter is suitable for applications that face challenges from agglomerative dust in industries such as chemical, pharmaceutical, cosmetic, textile, grain, woodworking, and metalworking. The filter media combines the surface-loading and dust release capabilities of high efficiency Ultra-Web technology with a spunbond polyester substrate for enhanced durability, moisture, and chemical tolerance. Filters ship in 24 hours and are available as replacement filters for popular dust collectors.
