

Portable Mixer Stands

ALS-Series Air-Lift mixer stands let one portable mixer easily mix multiple tanks, especially in pilot plants and laboratories with varying requirements. The stands are compact and stable, and they feature an air-operated hand pump for raising and lowering the mixer's shaft into a tank. Eliminating the need for several portable mixers in applications where the number of tanks being mixed varies, they can be equipped with a variety of options to meet specific customer requirements.

Available in epoxy-painted steel or stainless steel construction, the stands are offered in three stroke sizes: 36, 48, and 60 in. Options include a fully adjustable tank positioning arm, 2-in. nylon ratcheting tank strap, adjustable leveling guides, chrome plating, locking casters, counterweights, and a height-lock positioning collar. Prices start at \$3,000, depending upon construction and options.
