

Compressed Air Distribution

Two new diameters have been added to the SmartPipe compressed air distribution system. Made from smooth, calibrated aluminum with a low friction coefficient, the pipe is now available in 76 and 100 mm diameters. The modular piping system features lightweight materials and push-to-fit connectors that can be installed without threading, welding, or sweating. No special tools or trades are required for installation. The system boasts good flow and will not rust or corrode. Full bore fittings minimize pressure drop, and leak-free connectors prevent costly compressed air loss. All diameters can be integrated into existing systems made from other pipe materials. Simple mounting and connecting hardware makes installation easy. **Kaeser Compressors Inc., Fredericksburg, VA; 800-777-7873; www.kaeser.com/smartpipe**
