

Mixed In Seconds—Not Minutes

[Dynamic Air](#) [1] recently unveiled its Bella mixer, which is designed to achieve fast, precise high-capacity, low-shear mixing of either dry bulk solids or liquids with solids. According to the company, regardless of particle size, shape or density, materials are mixed rapidly, efficiently and gently-typical mixing times are 60 seconds or less. A weightless zone created by low-speed counter rotating shafts generates very little friction without shear. The mixing unit is available, furthermore, in stainless steel for sanitary applications.
