

Parker Fluid Control division

This direct-acting 3-way banjo valve eases installation as it screws into the piston or diaphragm actuator of Parker's angle seat valves. More specifically, its design can initiate air (whether dry or lubricated) actuation in process and control applications.

Normally-closed direct-acting banjo valve

Normally closed direct-acting banjo valve Operating pressures up to 150 PSI Input pressure port with 1/8-in. NPT threads Fluid temperatures from 0° to 185°F and ambient temperatures from 14° to 122°F
