

Detect Metal During Vertical Fall

The Fortress Phantom Gravity Metal Detector is designed for inline inspection of dry, powder or granular products that can be gravity fed through a pipe from a processing machine. The system features:

- Core DSP technology for precision and speed.
- UltraSense for the detection of small metal contaminants.
- Self diagnostic AutoTest functions.
- Auto Cal for instant system set-up.
- Optional IP69K certified BSH casing for complete waterproof protection.
- Digital Signal Processing technology to ensure product integrity.
- Optional painted aluminum, stainless steel and BSH (IP69K certified). The rectangular aperture units are suited for integration with conveyor belts.
