

Particulate Monitoring for Baghouse Leak Detection

BinMaster Level Controls has released the BM-30 LGX particulate monitoring system designed for general process and environmental monitoring. Features include:

- Detection of many types of particulate including solid particulates such as dusts, powders, granulars and pellets.
- Ability to detecting leaks before emissions are visible.
- Reliable induction-based technology.
- Control unit, a particulate sensor probe and a sensor coaxial cable.
- CE and EN 61010 compliance.
- CSA certification.
