

Magnetic Lifting Tool

The MagFORKLift by Bunting® Magnetics is designed to work in conjunction with any type of fork truck to shift up to 1,100 pounds of steel and iron material around a facility. According to the company, the lift is ideal for any business that either lacks an overhead crane or has a crane that doesn't cover certain areas of the operation. The MagFORKLift permanent magnet lifters:

- Attach to the two forks on any fork truck.
- Work with four different sizes of Bunting® MagLift™ hand-controlled lifters.
- Are designed to save time and labor by holding, carrying, and releasing loads more efficiently than any other manual or mechanical method.
- Do not require special cables or electrical hookups.
