

Refrigerated Cycling Compressed Air Dryer

The SSRC refrigerated cycling compressed air dryer from Sullair Corporation is available in nine models, ranging from 175 to 1000 scfm. The dryers utilize the reliable and energy-saving scroll compressor, and a zero-loss drain integrated into the heat exchanger to collect condensate. Additional features include:

- A high capacity demister separator that is designed to remove condensed liquids and lower the air velocity that maximizes the separation of condensate.
- Oversized condensers that allow operation up to 140°F air inlet and 115°F ambient temperatures.
- A control program to ensure the lowest dew points at all times.
- An environmentally “green refrigerant, R404A, that features zero potential for ozone depletion.
