

Tube Bundle Cleaning

The Saflex™ 3000 from NLB Corp. is a semi-automated water jet system that cleans tube bundles more productively than manual methods and has wireless remote controls that let the operator stand clear of the action. The system cleans three tubes at once, on both the in and out strokes and typically cleans 100 tubes in less than three hours. The system:

- Operates at pressures up to 40,000 psi (2,800 bar).
- Can clean tubes ranging from 4 mm to 15 mm in diameter.
- Has flex lances with adjustable stroke lengths to suit bundles of different sizes.
