

## Mist Eliminator Monitor

The FilterSense liquid mist flow monitors are used to monitor the outlet of all types of mist eliminators for mist carryover and mist filter failure detection. The monitors employ:

- A state-of-the art induction-sensing principle.
- A proprietary protected-probe, which ensures high reliability even in harsh environments such as acid mist, oil mist or water droplets in high pressure pipes.
- Outputs that include relay contacts, 4-20mA, Modbus and Ethernet.
