

Dust-Tight Discharge

The Material Master™ bulk bag discharge system from Material Transfer & Storage Inc. provides dust-tight discharge of non-free flowing materials using:

- A Sure-Seal™ actuated spout clamping system, which seals the bag discharge spout.
- A heavy-duty Flo-Master™ “breaker-bar” bag massaging system, which ensures product discharge.
- A powerful Flo-Lock™ actuated discharge spout closure system, which halts material flow for partial bag discharging.
