

Dynamic Liquid Polymer Dilution & Feed Systems

According to Fluid Dynamics, its dynaBLEND™ liquid polymer dilution/feed system exhibits the following highlights:

- Patented dynaBLEND technology to ease the task of blending liquid polymers for wastewater processes because it has been designed to effectively activate all types of liquid polymers.
- A non-mechanical mixing chamber that delivers an unparalleled degree of reliability when compared to other mechanical technologies.
- An injection check valve that has been designed for easy disassembly and inspection, thus eliminating many of the maintenance concerns that can affect other systems.
