

## A Line of Mini Bar Code Scanners

SICK recently launched a line of CLV500 Series miniature bar code scanners. Barely larger than a USB plug, these scanners grant:

- High decoding performance, along with a large depth of field that allows for flexibility in code sizes and target placements.
- Simple-to-configure bar codes.
- Easy installation where space is extremely limited.
- A high scanning frequency of 1,000 Hz on the CLV505, giving it the ability to reach conveyor speeds up to 5 meters/second, depending on the application.
- Ideal suitability of the CLV503 and CLV505 for packaging systems, circuit board processing and robotic inspection.
