

## Anti-Slip Surfaces

Safeguard Technology has added 5 new glow-in-the-dark colors, including safety yellow and lime, as well as orange, pink and green, to its originally photoluminescent white Hi-Traction Glo Series anti-slip surface. The Hi-Traction Glo surfaces additionally grant:

- A non-toxic, non-radioactive, photoluminescent pigment that is embedded in the surface and can be charged repeatedly throughout the life of the product.
- A photoluminescent background, so the message is visible after dark and during power outages, providing a safe egress during emergency evacuations.
- The capability to customize messages to illuminate descriptive markings and personal protective equipment in the dark.
