

## Customizable Water Wash Injectors

Spray injectors from Spraying Systems Co. are fabricated based on the application requirements; Injector insertion length, materials, special coatings, nozzle type and flange style are typically specified by the customer. Commonly used in FCCU and fractionator overheads, hydrotreaters and pipelines to minimize corrosion, cracking, blistering or eliminate salt build-up or sour gas, water wash injectors are manufactured:

- With a full cone, hollow cone or fine spray nozzles (most models).
- Using high-performance alloy construction.
- With the option of Canadian Registration Number requirements and ASME® B31.1, B31.3, welding, and boiler and pressure vessel code compliance.
- With physical testing options including visual testing, positive material identification, radiographic examination, liquid penetrant examination, hydrotesting, weld maps and spray/flow testing.
