

Pressure Transmitter with Flow Measurement

The Ashcroft® GC52 wet-wet differential pressure transmitter now includes features that allow the instrument to provide direct flow readings by measuring dp across a restriction. According to the company, the transmitter also features:

- Simple push-button settings that let the user program the correlation between pressure and flow rate while the on-board square root extraction calculation accurately yields a representative flow measurement.
- A flow totalization counter that can be activated to display the accumulated volume of passed fluid.
