

PVDF & PTFE Membrane Filters

Meissner's Steridyne® 50 (PVDF) and Ultradyn® 50 (PTFE) are multipurpose 50 mm filters for small volume venting, gas and solvent filtration. Designed and supported for bi-directional flow, the 0.2 µm-rated filters serve as a cost-effective hydrophobic vent filter. Additionally, the Steridyne® 50 and Ultradyn® 50 can be used to filter up to one liter of solvent or solvent-based liquids. When pre-wet with alcohol, the filters can be used to filter aqueous liquids. The filters are also:

- Equipped with stepped hose barb inlet/outlet connections.
- Suitable for gamma irradiation, venting TepoFlex® biocontainers and autoclaving up to 30 times.
