

High-Capacity Dry Separation Screeners

APEX™ Screeners from ROTEX Global LLC are high capacity with an ergonomic deck design for ease of maintenance. The screeners feature:

- One and two deck models with capacities up to 150 tph.
- A long stroke and low frequency motion that rapidly stratifies particles without remixing.
- Nearly horizontal decks to reduce product loss and increase overall yield to above 90 percent.
- Pre-tensioned, lightweight (less than 10 lb.) screen panels for fast maintenance.
- A counterbalanced drive, which ensures minimal transmitted forces into the support structure and allows an APEX Screener to be floor-mounted or cable-suspended from the building or corner support stands.
