

A Continuous Processing Attritor

Union Process has developed its first C-20 Series continuous attritor, a workhorse machine that uses 1/8- to 3/8-inch grinding media. The low-maintenance, high-efficiency mill additionally offers:

- Suitability for applications that require continuous production of large quantities of material.
- Compatibility with ceramics, paints, coatings, chocolates, agricultural products, metal oxides and multiple other materials.
- A swivel head that allows for easy access to the top of the grinding chamber.
- A 60-HP variable-frequency drive, tangential inlet assembly, media charging port and media discharge plug.
