

Label Printer Works Without a PC

Tharo Systems, Inc.'s H-series stand-alone label printing station can be remotely operated and performs many software functions using a keyboard with no computer attached. The thermal/thermal transfer label printer:

- Can download label formats, graphics and databases to the printer's flash memory.
- Allows data input data via the keyboard.
- Does not allow formats downloaded to the flash memory to be altered without re-attaching the printer to a PC.
