

Discharge Dry, Free-Flowing Materials

Aerodyne's StopTight KG Valve is ideally suited to discharging dry, free-flowing materials from gravity-fed hoppers, silos, mixers, screw conveyors and chutes. The valve can also isolate airlock valves from hoppers during routine maintenance or emergency shut downs. A series of adjustable cam-guides support the slide plate and seal it firmly against the machined inlet seat. Valve specifications include:

- 8", 10", and 12" sizes in manual or pneumatic operation.
- Cast-aluminum body and stainless-steel slide plate.
