Facility Video Management System

Longwatch has released Version 5.2 of its video management system. The system can be used to monitor and record operator actions, and capture live video from various locations in a process plant. It can be used for security and process monitoring, and interfaces with most HMI/SCADA systems and process historians. Enhancements in Version 5.2 include:

- A value edition of the console recorder.
- A low-power XLP version of the video system that delivers surveillance in remote areas with limited power budgets.
- Improved database functions.

A free demo version can be downloaded at <u>longwatch.com/productivity/value-edition.php/</u> [1].
