

# An Industrial Vacuum for Combustible Dusts

VAC-U-MAX says that its 860/02 industrial vacuum is ideal for those who want to eliminate drum handling, and collect and discharge powders in a safe, dust-free and convenient way. The 860/02 incorporates:

- The field-proven air-powered vacuum cover with manual pulse-jet filter cleaning and non-stick filtration that captures 99.9 percent of particles as small as 0.5 microns.
- A rugged portable frame that includes a collection hopper with an automatic discharge valve and polybag loading accessory.
- Automatic discharge of the collected powder into an off-the-shelf static-conductive polybag when the vacuum is turned off.
- An intrinsically safe design with a fully grounded accessory kit, static-conductive filter media and an anti-sparking material inlet to allow the vacuum to be used in Class II, Div. 2 environments as required by OSHA.
