

Durable Brass Water Turbines

OMEGA Engineering presents its new FTB370 flow turbines as compact in design with a wide measuring range. These brass water turbines grant:

- Flow rate measurement of water and many water-based liquids.
- Sapphire bearings to ensure optimal life expectancy.
- A uniform bearing load design that minimizes wear.
- A fixed pulse rate and a wide turn-down ratio.
- A NEMA 3 (IP54) rating.
- Suitability for water and wastewater industries.
