

Oil-Absorbent Mats with a Color Flare

New Pig Corp. recently unveiled its PIG® oil-only absorbent mat with Color Flare™ technology, which is specifically designed to change color to reveal light-colored oil leaks that are nearly invisible on standard absorbents. The mat further boasts:

- An outer spun-bond layer of the mat that contains oil-indicating wax dots, which dissolve in oil to release dye, so the mat flares bright blue to provide a clear visual indication that mineral oil or hydraulic fluid is leaking.
- A UV-resistant, water-repellent design that is impervious to rain and other wet conditions.
- The power to act as an instant alert to problem leaks and drips.
- Faster and easier routine inspections of outdoor generators, power units and other equipment.
- Suitability for both indoor and outdoor use.
- The ability to aid in compliance with 29 CFR 1910.22(a)(2), 40 CFR 112.7 and 40 CFR 122.26.
