

Heaters that Go with the Flow

OMEGA Engineering has designed its FTH Series flow-through heaters primarily for providing heat to regulate liquid temperatures from 32° to 88°C (90° to 190°F). They also come with:

- A titanium element that resists corrosion.
- An enclosure made of ABS plastic.
- Water resistance.
- Ideal suitability for maintaining water temperature as it's pumped around the plant or the water temperature in test tanks.
