

## Keep Tabs on Your Inventory

Deacom Inc., producer of the DEACOM Enterprise Resource Planning (ERP) software system for mid-to-large sized batch process manufacturing companies, has released a new version of the DEACOM ERP software system. According to the company, the enhancements made in the new 14.3 build release include:

- Inventory Management and Quality Control (QC) functionalities, including a global unit of measure table, a master production calendar for job scheduling, new lot location capabilities, master lots and container tracking for license plating.
- Two new supporting tools: a User Acceptance Test Script, which will assist customers with the testing of critical business functionality in all new DEACOM build releases, and a new Help System, a web-based help system which provides supporting documents on the main application, the warehouse management system and the API library.
- The company supplies software upgrades at no charge to all of their existing clients — not just to those who have requested the new functionalities.
