

## Root Cause Analysis Software

Well known for helping thousands of students from industry-leading companies solve recurring problems and reduce risk, Sologic™ (formerly Apollo Associated Services) has introduced Causelink™ root cause analysis software. According to the company, key features include:

- It is the only RCA software on the market that clearly displays 50-plus causes in an 8.5-inch by 11-inch active workspace, offers printout and PDF and is built using a state-of-the-art technology platform compatible with current IT architectures.
- Causelink helps organizations to more effectively apply the Sologic root cause analysis method to solve real-world problems by guiding users through a logical process — from initial data gathering through to final reports and resolution plans.
- The software empowers users to create cause and effect charts quickly and efficiently, identify evidence-based causes and effective solutions, analyze and share data, report to leadership in a language and format that captures their attention and active support, pinpoint and solve systemic problems, reach business goals and demonstrate ROI.
