

A Square Alternative to Cylinders

Meissner Filtration has designed its QuaDrum™ rigid outer containers to offer a square alternative to industry-standard cylindrical drums. According to the company, these containers boast:

- A squared base to provide a more stable option than standard drums.
- A unique footprint to maximize floor space utilization.
- The ability to facilitate the easy, accurate and repeatable deployment of compatible 3D TepoFlex® single-use biocontainer assemblies.
- An optional stainless steel dolly, which offers intra-facility mobility, while taking advantage of the square shape to enable dynamic stability.
