

Dehumidify without Using Excessive Energy

Bry-Air's new EcoDry™ energy-efficient desiccant dehumidifiers, featuring BrySmart control technology, reduce energy usage by up to 45 percent. According to the company, the dehumidifiers, which are the most energy efficient in the market, are additionally characterized by:

- The patent-pending "BrySmart" microprocessor-based system uses dynamic control of dehumidifier operating parameters to dramatically improve part-load energy efficiency.
- Proprietary control algorithms dynamically and simultaneously control reactivation airflow and temperature and rotor speed.
- Only the amount of energy needed in the drying process at any particular time is used, reducing energy usage and operating costs significantly.
- BrySmart can be retrofitted to existing installations providing the benefits of improved operations and lower energy costs.
