

## Ground Monitoring System

Newson Gale's recently upgraded Earth-Rite® FIBC is an effective way to ensure that correctly specified Static Dissipative (SD) or Conductive materials are used in hazardous-area applications involving FIBCS (big-bags or super-sacks) and other flexible or semi-rigid containers. According to the company, the Earth-Rite® FIBC:

- Uses intrinsically safe monitoring electronics, which continuously verify the containers' resistance and satisfactory connection to ground in the form of pulsing green multi-LEDs.
- Can also be interlocked with the process to prevent transfer of product until a safe condition exists.
