The Most Solvent-Resistant Label Yet

Computer Imprintable Label Systems recently launched the ultimate solvent-resistant computer-printable label to resist Xylene, MEK, IPA, DMSO and more. These durable labels also offer:

- The power to print these labels straight from a standard laser or thermal transfer printer.
- The ability to add variable data (batch numbers, barcodes, etc.) in minutes, saving time and eliminating the risk of smudged/illegible hand-written data.
- The specially formulated CILS-8100S computer imprintable surface coating, which ensures all variable data remains clear and legible under extreme solvent exposure, without any secondary laminates or tape.
- Ideal suitability for microscope slides, high-performance liquid chromatography columns, tissue cassettes, vials, tubes, etc.
