

Particulate Monitors for Dryers

The FilterSense particulate monitor is designed for chemical spray dryers and pharmaceutical powder fluid-bed dryers. According to the company:

- The company's proprietary combination of Induction Technology and a Protected-Probe provides low-level measurement capabilities (0.01mg/m³), which is important in the pharmaceutical industry to prevent the loss of valuable powders from filtration systems.
- Moisture present in a drying process or the buildup of wet powders will not affect operation.
- Outputs include 4-20mA, Modbus and Ethernet.
