

A Variety of Metering Mechanisms

Acriston introduces its 407 Series weight-loss weigh feeders with a variety of different metering mechanisms capable of feeding a broad range of even the most difficult-handling dry solids materials. According to the company, the 407 also features:

- A high-resolution, non-load cell-based weighing mechanism that doesn't require field calibration or adjustment.
- A small footprint that results in low overall space requirements.
- A robust design that is suitable for industrial environments.
- An unconditional 5-year guarantee, not only for the weighing system, but also its associated electronics.
