

## Extractables Test Results for Tubing

AdvantaPure now offers one of the most comprehensive portfolios of extractables testing for silicone and thermoplastic elastomer (TPE) tubing in the pharmaceutical and clean application industries. Used primarily for fluid flow applications, this tubing is additionally highlighted by:

- Testing for extractables — substances that can be drawn out of a product under extreme conditions — which must be known long before a section of tubing can be used in a pharmaceutical or biopharmaceutical manufacturing process.
- Construction from Class VI platinum-cured silicone, platinum-cured liquid injection molded silicone or AdvantaFlex® biopharmaceutical-grade TPE tubing.
- Availability as single-use molded manifold assemblies, bulk coil lengths and assembled with sanitary fittings.
- The convenience of ordering a summary or comprehensive report to show the chemical and analytical bracketing of various test parameters.
