

Product-Compliance Content Solution

3E Co.'s Ariel Data Manager® (ADM)-MM is a powerful new product-compliance content solution that helps material managers optimize SAP® Material Master (MM) as a central source for storing and retrieving material-specific data in SAP. The company says that the new solution:

- Enables SAP MM users to streamline business processes and reduce costs by collecting, managing, and integrating critical regulatory product compliance documents directly into their SAP systems.
- Promotes both efficiency and compliance by providing a powerful solution for integrating valuable content in SAP MM.
- Offers sophisticated content management features that enable users to import robust document sets — including Safety Data Sheets (SDS), compliance declarations, technical data sheets and material declarations — directly into SAP MM for association with purchase requisitions, bills of materials (BOMs) and finished goods.
- When combined with 3E's custom obtainment and SDS management services, it also promotes enhanced supplier communications and data extraction; global document obtainment and delivery; and SAP MM-related resource optimization.
