

# Revolutionizing Septage Receiving

Enviro-Care and SAVI S.r.l.

introduce the Flo-Septage Station DM as the first piece of equipment that has been designed specifically for septage receiving. More than just a screen in a tank with a ball valve, according to the company, the DM provides:

- A tank that is designed to eliminate sedimentation.
- A dual-drive system to permit the screen basket and auger to run independently for better capture and faster removal of solids.
- A screen unit that sits at a 25-degree angle of inclination.
