

Polymer-Composite Coating System

ENECON Corp.'s METALCLAD

CeramAlloy™ CL+AC is perfect for repairing, resurfacing and coating components to provide outstanding fluid flow erosion and corrosion resistance. According to the company, the system is:

- A 100 percent solids, two-component liquid polymer.
- Viscous liquid when mixed, but cures to a hard, ceramic-like material with an extremely smooth surface finish.
- Suitable for resurfacing and protecting all types of fluid flow components from aggressive erosion and corrosion damage.
