

Inventory Management's Best Friend

Xpress Pix™ Go-Fetch inventory management software from Sapien Automation is an entry-level software system that can be used to manage order picking and replenishment activities in storage and retrieval operations. The company says that the software is characterized by:

- It is designed to retrieve parts stored in Vertical Carousels, Vertical Lift Modules (VLMs), Horizontal Carousels, and Pick to Light devices and systems.
- With the software, inventory can be managed by location within the storage unit, by item or part number, by description or by location quantity.
- For automated storage system replenishment, users can input a minimum quantity of each item they wish to have on hand.
- The software prints a report that displays a list of items that need reordering, as well as the quantity that is generally reordered.
- A single PC with the software can drive and manage a pod or work zone of a single or multiple carousels or VLMs and manual material handling work zones.
- In addition to Pick to Light systems, the software can be integrated with a report printer, label printer and bar code scanner.
