

Enhanced Process Automation System

Emerson Process Management offers DeltaV™ Version 12 (v12) with features that build on the system's ability to help users simplify complex operations for increased productivity and value. According to the company:

- Key features in the new release include the recently announced expansion of Emerson's innovative electronic marshalling, combining the proven performance and reliability of the DeltaV Safety Instrumented System (SIS) with the installation flexibility and space savings of its Electronic Marshalling technology.
- The v12 release also includes integrated virtualization technology which enables users to easily consolidate computer resources and reduce implementation and maintenance costs.
- For process industry users who produce in batches, the v12 release includes an easy-to-use analytics application that provides real-time quality predictions while the batch is in process.
