

Filling & Finishing Drug Products

Sartorius Stedim Biotech and Bosch Packaging Technology have agreed to mutually design and develop single-use filling solutions to be used on Bosch's aseptic filling equipment for final fill-and-finish operations of drug products. According to the companies, benefits of this collaboration include:

- The combination of Sartorius' pre-configured single-use filling transfer sets, consisting of bags, filters, tubing and connectors with Bosch's aseptic filling and barrier isolation technology into innovative systems for aseptic filling.
- Pre-validated, pre-assembled and pre-sterilized plug-and-play tools for aseptic filling operations that provide additional flexibility and come along with comprehensive validation packages.
- The flexibility to more easily handle smaller batches and product changeovers in a safe way.
- Configurable and customized single-use filling solutions.
