

High-Performance Control & Information Solutions

Rockwell Automation offers an expanded Midrange system portfolio of scalable Allen-Bradley servo drives, variable frequency drives, industrial Ethernet switches and unified engineering and design. According to the company, this offering:

- Will help machine and equipment builders reduce cost and complexity, and will provide more competitive, performance-driven offerings around the globe.
- Lets end-users standardize on one common technology, enabling more efficient collaboration, streamlined project maintenance and faster system deployment.
- Features the following: Rockwell Software Studio 5000 unified engineering and design environment; Allen-Bradley Kinetix 5500 Servo Drive and VPL Servo Motor on EtherNet/IP; Allen-Bradley Stratix 5700 Layer 2 Managed Industrial Ethernet Switch; Allen-Bradley PowerFlex 525 AC Drive; and Integrated Architecture Simplification Tools.
