

Lightweight Directional Control Valves

Comatrol's PSV12-34 proportional directional control valves offer precision hydraulic controls with a focus on customization, compact size and flexibility. According to the company, the valves are characterized by:

- They include both closed center and float center schematics with flows ranging from 3 LPM up to market-leading 60 LPM.
- The flow capacity allows the flexibility of cartridge technology to be applied on a broad range of applications and machines, including larger machines that require higher flow for cylinders and motors.
- They are now available with Robust Coils, for a wide variety of extreme environmental conditions, such as voltage extremes, high ambient temperature, shock & vibration, chemicals and/or water ingress.
