

Optimizing Space with the SpeedCell®

The SpeedCell® high-density warehouse storage system saves time, space and money by innovatively and intuitively organizing your warehouse. According to the company, it delivers:

- An array of mobile vertical shelving columns made from anti-static, flame-retardant technical textiles, which slide sideways to reveal even more columns behind them.
- The transformation of traditional storage bays into high-density storage modules, eliminating under-utilized space, while allowing quick and easy access to every item inside.
- Enhanced picking efficiency by increasing storage density and eliminating dead space.
- The flexibility to be reconfigured to fit almost any size product and in a multitude of arrangements.
